Introduction

So far no official list ascribing specific post offices to Numeral Cancellers of the Cape of Good Hope has been located. Thus the information that follows has been derived from proving covers, proving pieces and occasionally from individual stamps and/or blocks of stamps, by innumerable philatelists over many years.

The number of recorded dates for each numeral is solely the responsibility of the author from his records, and is given more to emphasize the accuracy of the ascribing of specific numerals to individual post offices, and also to emphasize the potential scarcity or otherwise of a specific BONC, than for any other reasons. Where a specific numeral has been ascribed more than once to the same post office, it can be assumed that the ascription is probably correct.

The first edition of this monograph incorporated all the accumulated data of the author on this subject up to 31 December 2016. This edition encompasses the data known to the author as at 31 March 2025.

Thus the total number of recorded dates in the First Edition was 3,330 – in this edition 6,158, an increase of 85%.

Distribution of the BONCs

As at 31 March 2025, the breakdown and accumulated knowledge of the probable nine distinct BONC distributions is as follows:

Earliest Prominent Usage	BONCs	Total	Identified Post Offices		CGH + Other Territories (if unidentified)		Completely Unidentified	
Year			No.	%	No.	%	No.	%
1864	1-39	39	39	100	0	0	0	0
1874	40-200	161	120	75	30	19	11	6
1877	201-400	200	167	83	30	15	3	2
1882	401-600	200	148	74	46	23	6	3
1884	601-800	200	134	67	61	31	5	2
1892	801-1000	200	113	57	70	35	17	8
1896	1001-1200	200	87	43.5	67	33.5	46	23
1901	1201-1400	200	47	23.5	53	26.5	100	50
1906	1401-2001	27	6	22	8	30	13	48
Totals		1427	861	60	365	26	201	14

Thus at the end of 2016, 55% of numerals had been allocated to post offices; now eight years later 60%. So in the 8 years a further 96 BONCs have been allocated to post offices (including the elusive BONC 33 – the other elusive BONC 8 in the first allocation of 39, had been traced in 2015).

BONCs 1, 2 and 3 appear for the first time in 1864. BOND 1 of Cape Town has been reported once as used on 8 Feb 1863, but this may well have been a trial canceller used by the post office to test whether numeral cancellers were what they desired to replace the ageing Barred Triangular Obliterators (BTOs). The latter had been taken into the postal service when the Cape Triangular Stamps had been introduced in 1853. The BTOs had arrived at the Cape in 1837 to process fiscal documents, and in 1853 were transferred from the Treasury to the Post Office.

There are a few anomalies to the above “Earliest Prominent Usage” timelines that require further elucidation. For example BOND 184 has been recorded used in 1870; BOND 965 in 1872; BOND 202 in 1874; BOND 530 in 1876; BOND 1338 in 1889; BOND 1112 in 1890; and BOND 1241 in 1896.

But other than these seven seeming exceptions, the above “Distribution of the BONCs” seems to be a fairly accurate representation.

It appears that after BONCs 1, 2, and 3 were issued to the three most populous towns in the colony (namely Cape Town, Port Elizabeth and Grahamstown in the 1863/4 period) that further distribution of the BONCs was entirely at random from the BOND canceller stocks on hand, as and when it was deemed necessary to supply a numeral canceller to a Post Office. No noticeable pattern as to size of town or magisterial district can be gleaned. It is not even clear whether the BONCs were issued chronologically from lowest number to highest in the approximate 200 that were issued approximately every four years after 1874.

One BOND being used at two or more different post offices at the same time, probably indicates the movement of a postal official from one post office to another; in the process taking the cancelling instruments with him.

No attempt to edit the work of other philatelists has been made. Their reported findings have been recorded in this monograph and the author’s data bank. A few improbabilities may possibly have been caused by indistinct cancels, difficult to decipher accurately.

This monograph also enumerates the CGH BONCs that have been reported to have been used in territories other than the CGH. These encompass Basutoland, Bechuanaland, British Central Africa (Nyasaland, now Malawi), British South Africa Company (Rhodesia, now Zimbabwe), Orange River Colony, Swaziland, Transvaal, and Portuguese East Africa and Tanganyika. In total these allocations amount to about 210 reports that could be allocated to numerals.

Occasionally BONCS appear to have been used as receiving cancellers at a post office, although they were supposed to be used only as dispatching cancellers. Even more rarely they appear to have been used as in transit cancellers. In both these cases it may have been that the dispatching post office failed to use an obliterator on a cover’s stamp.

Diameters of the Bars of the Cancellers

Previously only thick bars (about 2mm in diameter) and thin bars (0.25mm in diameter or considerably less) have been recognised. However, a study of bar diameters reveals a medium bar (about 1mm in diameter) is more prevalent than previously thought, especially in BONCs whose numbers exceed 1000, and therefore from 1896 onwards. Medium diameter bars also appear in earlier numerals, but only sporadically after BONCs 1, 2, 3, & 4. A strike of BOND 2 with medium bars has been recorded as early as 13 March 1871.

Duplex Cancellers

In a Duplex Canceller, the BOND and the single circle town identifying cancel, are joined together to form one cancelling instrument. Only three Duplex Cancellers are known, two used in Cape Town with Numeral 1, and one used in Port Elizabeth with numeral 2. Their earliest and latest dates of usage and configuration are recorded in the attached tables.

Format of date

The earliest and latest dates are written according to the British system; day-month-year. The earliest date is in 1863; the latest 1963. A full century of usage!!
